

eNetMini 2105

- HTTP, JSON, REST API, MQTT Client
- Magnetic Switch, Motion Detector
- Sensors for Pressure, Humidity, Temperature, Light, Air quality (IAQ), and VOC measurement
- Standalone, no cloud registration required
- Power supply directly via the network (PoE)

eNetMini 2105 - Simple integration of environmental sensors into your infrastructure

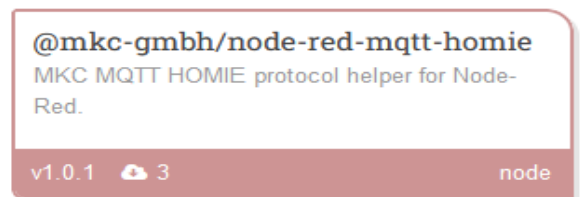

Our embedded device with environmental sensors can be easily integrated into your IoT or smart home applications thanks to **MQTT** support and a **JSON API**. It offers direct power supply via the network (**PoE**, **Power over Ethernet**), reducing installation efforts and increasing flexibility. With precise sensors, the device provides important real-time data that optimizes your systems.

For even easier use, we provide a [library](#) for the open source software **Node-RED**, which enables graphical programming without code. This means: **no cloud registration, no license fees** - everything remains local and secure true to the motto: "My data belongs to me".

For a customized solution, we offer an optionally available 3D-printed housing. The design data for the housing is available on [GitHub](#), so you can modify and customize it to your own liking. This freedom allows you to integrate the device perfectly

into your environment and develop it further as required.

This allows you to integrate the device quickly and individually into your infrastructure and adapt it to your needs.
